

LIVELINK OUTDOOR

FLEXIBLY AND QUICKLY
CONNECTED WITH
LIVELINK BLE

LiveLink Outdoor – light points become an intelligent network

Safety and orientation have top priority in the illumination of parking lots and outdoor areas close to buildings, for example, as well as in industrial areas. For this reason, the luminaires used here must not only impress with the highest quality of light, but also prove their worth over the long term under extreme conditions.

With LiveLink BLE (Bluetooth Low Energy) you are prepared for the future. The Casambi software is compatible with a wide range of systems - such as DALI or DMX. A Zhaga interface on the luminaire enables flexible use of a lighting management system without having to commit to a specific software or provider. The existing lighting infrastructure remains unaffected.

YOUR ADVANTAGES AT A GLANCE:

- **easy to retrofit:** luminaires with Zhaga interface can also be retrofitted via plug and play
- **future-proof:** thanks to the Zhaga interface, changes in the future do not require any complex conversion
- **flexible and independent:** The Casambi software is compatible with many different systems - such as DALI or DMX
- **light on demand:** motion or daylight sensors increase energy savings
